Git

- version control system
- git init - initializes a new repository
- git status - shows current folder status
- git add <filename> - add a file to the staging area
- git commit -m "message" - commit changes to the repository

Bash Shell

- ls - list all folders and files
- pwd - list the present working directory
- cd - change directory
- mkdir <folder> - make directory

Vi Basics

- vi \<filename\> - open/create a file

- two modes: insert and command

- to enter insert mode: 'i'

- to exit insert mode: \<ESC\>

- to exit and save: ":wq"

- or ":w \<filename\>" and then ":q"
